Product owners, software developers, and Scrum Master are set and ideally don't change over time; the critical part is the Release Manager role you need to define here							

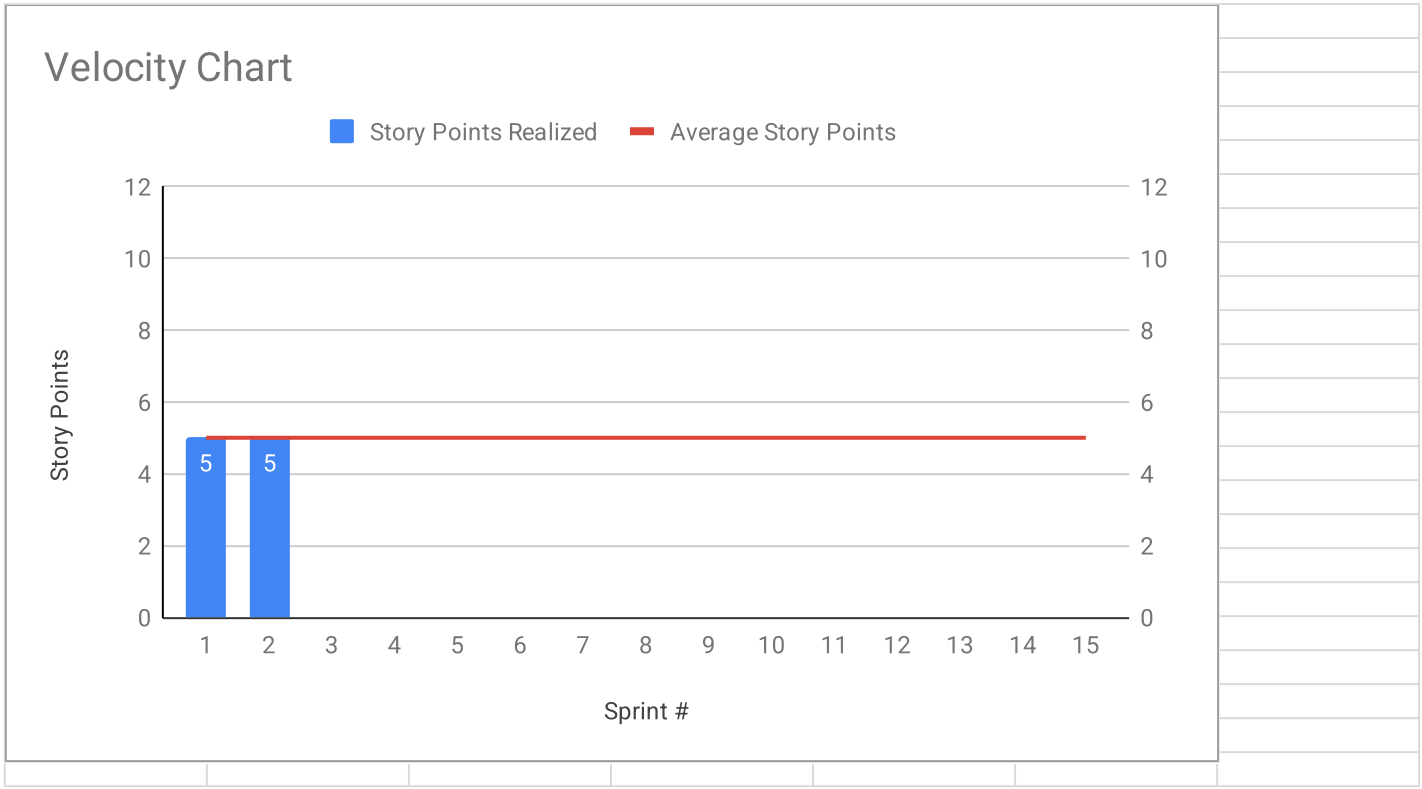

Goals	Ensure everyone learns the AMOS lessons
	Helping and learning from each other
	Ensure happiness with final result
	Have a good team experience
	Deliver an MVP and successfully complete the project
	Comply with relevant standards
Meeting norms	Be punctual
Working norms	Complete adopted sprint backlog items by the end of a sprint
	Decide based on consensus (everyone but one needs to agree)
Coordination norms	Communicate information intime e.g. for meetings you might miss
Communication norms	Be open and honest about what needs saying
Consideration norms	Be respectful and considerate about others
Cont. improvement norms	Regularly update the team on progress
Rewards	
Sanctions	(After one warning) talk to the authorities
Signatures	
Scrum Master	Sara Pervana
Product owner	Nicole Thomits
Product owner	Zeynep Haykır
Software developer	Leon Hirschpeck
Software developer	Moritz Barvencik
Software developer	Linfeng Li
Software developer	Wasim Akram
Software developer	Yara Soliman

Product Vision	Project Mission
Small and medium-sized industrial companies need software that fits their own products and processes, but they can’t afford to have it built from scratch. ODOS makes that possible. It gives them a digital twin of their product or plant that they can trust, from planning to end-of-life. Laws, standards and company rules are part of the twin, so only designs that follow them are accepted.	In this project we look for a way to turn laws and standards into rules that a computer can check. We start with two example documents, the EU Machinery Regulation and the German Musterbauordnung. We compare different options, then work on getting the rules out of PDF documents and applying them to digital twins. At the end, we give Wisdom Bridge AI a clear recommendation and, if possible, a working prototype.

Term	Definition
D.	-
Digital Twin	a virtual representation of a physical object or process
E.	-
ERP	(sw.) Enterprise Resource Planning
M.	-
MES	(sw.) Manufacturing Execution System
O.	-
Ontology	a formal model for a specific domain, describing the terms (classes), properties and relationships which exist in said context
P.	-
PLM	Product Lifecycle Management

Sprint #	Sprint goal
1	Set up the team and its ways of working, and establish contact with the business partner.
2	Present researched options for representing normative documents to the business partner and agree on which ones to explore further.
3	In depth research on Akoma and SHACL, have a meeting with the business partner & receive feedback. Start working on the JSON schema

How to play planning poker

1. Everyone type their number into their value field, don't hit return yet
2. Someone, perhaps a product owner, count down 3.. 2.. 1..
3. Then, everyone hit return to submit their value

Efficient approach

1. Estimate the story points for the current ticket
2. Once ready, click and type in your estimation into the cell under "Value" which corresponds to you and wait for the signal to hit ENTER
3. In case of a new round, the MC resets the fields, everyone clicks away and go to 1.
